The history of modern medicine is replete with both once-in-a-lifetime scientific breakthroughs and steady, continuous advances. The pace of this progress has accelerated of late, but one key aspect of medical manufacturing was holding it back: sterilization. Until recently, medical manufacturers were forced to rely upon decades-old methodologies—that were often employed under harsh or rigid conditions—to sterilize their products. But now, thanks to the arrival of the REVOX Sterilization System, there is finally an innovative, room-temperature sterilization solution that befits the age of cutting-edge medical technology and just-in-time production.
